Nmap for Termux :

Nmap is the no.1 Hacking Tool, it is widely used by Hackers, Pentesters, Security Researchers,

It is mainly used to scan for open ports on any server, it consists of some powerful scripts that makes our work much easy

How to install Nmap in Termux

You can **install Nmap in Termux** just by typing a few commands

If you have already installed Termux from play store then open Termux and type below command

```
“ termux-setup-storage ”
```

You will be asked to give permission to Termux for storage access

After that type below command

```
“ apt update && apt upgrade ”
```

After that you will be asked to update packages to newer packages, so simply type **y** for yes and hit enter

To install Nmap you have to type below command

```
“ pkg install nmap ”
```

That's all you have successfully installed nmap in Termux

Hydra for Termux

As you know **hydra** is a powerful brute force tool to guess and crack valid passwords, let's see how we can install it on Termux

How to install and use hydra in Termux

Hydra can be installed in Termux just by typing below command

```
“ pkg install hydra ”
```

After installing hydra, you can use hydra by typing **hydra** in Termux
